DIGITAL LITERACY PROJECT REPORT

Course Code: CSE0001
Course Title: Digital Literacy

Submitted By: Parth Gabale
Registration Number: 25BCE10101
Branch: B.Tech CSE core
Year: First Year

Institution:
VIT Bhopal University

1)INTRODUCTION

The project is based on the concept of digital literacy and the importance of digital literacy in the present technological era. Being a student of the Digital Ambassadors program, the aim of this project is to spread the importance of digital literacy among the student community in an effective, safe, and responsible way. The project involves various activities that require the student to have knowledge of digital literacy, a professional online presence, explore the online world, proper communication etiquette online, and knowledge of cybercrime and how it is prevented.

From this project, I have gained experience in the use of various digital tools such as Canva, GitHub, LinkedIn, Google Forms, and coding tools. Moreover, it has helped me learn the importance of communication, evaluating information, and safety online. This project has given me knowledge of the importance of digital literacy in the lives of students.

2)TASK 1

For the task, I created an infographic related to digital literacy awareness using Canva. The design of the infographic was intended to effectively present the concepts related to digital literacy in a way that could easily be understood by the students.

The infographic contains four major sections: the definition of digital literacy, safe internet usage, digital tools, and professional online presence. The design is simple and appealing.

The most interesting part of the task was learning how to effectively present the information in the given space. The most difficult part was finding the right balance between the design and the clarity of the information presented, ensuring that the design is not cluttered.

The task has helped me learn the importance of digital literacy and how it could be effectively presented using Canva.

3)TASK 2

For Task 2, I had to make profiles on GitHub, LinkedIn, and Kaggle. These profiles will assist me in creating a digital footprint. GitHub is a site where developers share their coding projects. This will assist me in showcasing my coding skills. LinkedIn is a professional networking site. Here, I had to add information regarding my education. This will assist me in networking with people who come from a similar background. Kaggle is a site where I can practice problems and enhance my analytical skills. This site allows users to practice data science and machine learning problems and compete with other users.

Thus, I have come to understand the importance of having a professional digital footprint. I intend to update my GitHub profile with coding projects, build a professional network using LinkedIn, and enhance my analytical skills using Kaggle in the next four years.

This task has helped me take the first step in creating a digital footprint, which will be helpful in the future for internships and other career prospects.

4)TASK 3

For Task 3, I used a coding practice platform and a cloud-based collaboration tool. I created a Digital Literacy Awareness Quiz using Google Forms. The quiz contained five questions related to digital literacy, such as internet safety, passwords, and suspicious emails. It included multiple-choice and short answer questions, allowing me to learn how to create interactive and engaging quizzes. I also linked the quiz to a Google Sheet, enabling me to learn how to organize and effectively utilize the gathered data.

I also learned how to use an online platform for creating and effectively using digital content. This helped me learn how to effectively utilize this platform in my academic life. This task helped me learn how to effectively present questions and obtain useful feedback.

The tools I used for this task are very useful for my academic life. They can be used for conducting surveys, organizing data, and effectively collaborating with team members. This task helped me improve my knowledge of digital tools.

5)TASK 4

A typical example of poor digital communication is when a student communicates with their professor through an email but fails to include a subject line, greeting, and an explanation of their request. This means that a student may write an email to their professor requesting something but fail to include an explanation in their email. For example, a student may write an email to their professor that reads: “Send marks” without including an explanation.

This issue can be resolved in an effective manner by ensuring proper etiquette in communication. This means that the student should include a subject line in their email and also write a greeting while explaining their request in a proper manner. This will ensure effective digital communication and a good relationship between students and their professors.

6)TASK 5

During my research on the topic of phishing and online fraud, I was surprised by the fact that attackers are able to easily create fake messages and websites that appear to be authentic. It was shocking for me to learn that even minor mistakes, such as clicking on a link without checking the source, could result in severe outcomes such as financial loss or identity theft.

This task has made me more aware of the significance of being vigilant during online activities. A change that I am going to implement in my behavior is that I am going to be more vigilant before clicking on any links or disclosing any of my information online. I am also going to ensure that I check the authenticity of the emails and websites before relying on them. This task has helped me understand the significance of cybersecurity in online activities.

7)conclusion –

This project helped me to gain a comprehensive knowledge of digital literacy and its significance in today's digital world. Through all the tasks included in this project, I learned to use digital technology appropriately, develop a professional online identity, and use digital technology to communicate appropriately. I also learned about cyber crimes such as phishing and the importance of staying safe online. Working on platforms such as GitHub, LinkedIn, and Google Forms helped me to develop my skills, which will help me throughout my academic and professional life. This project helped me to gain more confidence in using digital technology appropriately.
